The splits will not change the total value of a shareholder's investment. Reverse Splits ProShares will implement reverse splits for 16 of its ETFs at the following split ratios. The reverse splits will be effective prior to market open on May 28, 2026, when the funds will begin trading at their post-split prices. The ticker symbols for the funds will not change. All funds undergoing a reverse split will be issued new CUSIP numbers, listed above. The reverse splits will increase the price per share of each fund, with a proportionate decrease in the number of shares outstanding. For example, for a one-for-two reverse split, every two pre-split shares will result in the receipt of one post-split share, which will be priced two times higher than the NAV of a pre-split share. Illustration of a Reverse Split The following table shows the effect of a hypothetical one-for-two reverse split. Period of Shares Owned Hypothetical NAV per Share Value of Shares Pre-Split 1,000 USD 10.00 USD 10,000.00 Post-Split 500 USD 20.00 USD 10,000.00 Fractional Shares from Reverse Splits For shareholders who hold quantities of shares that are not an exact multiple of the reverse split ratio (for example, not a multiple of five for a one-for-five reverse split), the reverse split will result in the creation of fractional shares. Post-reverse split fractional shares will be redeemed for cash and sent to your broker of record. This redemption may cause some shareholders to realize gains or losses, which could be a taxable event for those shareholders.
